

LHS / RHS

...A NEW ART PROJECT

LHS = Left Hand Side

RHS = Right Hand Side

////////////////////////////////////

Really, this is TRUE mathematics turned into artwork, with some CREATIVE thinking on OUR end. It came to us when corresponding with a fellow artist in the California area, named James F. Regan [who'll be a part of future collaborations; including this one].

The crux of LHS/RHS is that ONE side of the painting is painted by (say), : Alexej, and the other side is painted by (say), James F. Regan. Two artists painting the same painting but with different styles. AND we'll get more done this way. Just imagine if certain painters [e.g. Raphael] had help from fellow artists to "double-paint" the Portrait of Bindo? Mathematical Logic certainly has its place within the world of art. It's ABOUT TIME we begin turning artists into super human computing mathematical wizards . . . [only the results may not be "picture perfect"].

BUT it WILL be interesting to see where this LEADS.

Notes and photographs from these collaborations will be posted as they surface/come about . . .
